-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 8/28/06 has been entered.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 5-8 are rejected under 35 U.S.C. 102(b) as being anticipated by Norman, U.S. Pat. No. 4,033,664.

Norman teaches a battery case comprising a terminal hole in a peripheral wall (abstract), a flange located on interior surface of wall (col. 3, lines 28-30), and a contact member having a cylindrical mounting portion inserted through the terminal hole and having a first end riveted to an outer surface of the wall (col. 1, lines 20-22); a contact portion connected to a second end of the cylindrical mounting portion and engaging a positive terminal, the contact portion located on the flange (col. 1, lines 25-51); and a connecting portion connecting the contact to an electric wire, the connecting portion

Art Unit: 1745

extending outwardly from the contact portion along a side of the flange supporting the connecting portion, the connecting portion spaced apart from a casing of the battery (col. 2, lines 6-10), wherein cylindrical mounting portion, contact portion, and connecting portion engage battery case (col. 3, lines 25-35). It teaches the side surface of the flange is a sloping surface (Fig. 1, #7). It teaches the flange has a circular shape (Fig. 1, #7). It teaches the cylindrical mounting portion is hollow (Fig. 1).

Thus the claims are anticipated.

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Dougherty et al., U.S. Pat. No. 4,775,604, teach an apparatus for sealing a battery terminal post.
